Inicio Trabalho (Teams) Entrega dia 08/06

① $p_{i1} = P(X_{n+1} = 1 \mid X_n = i)$?

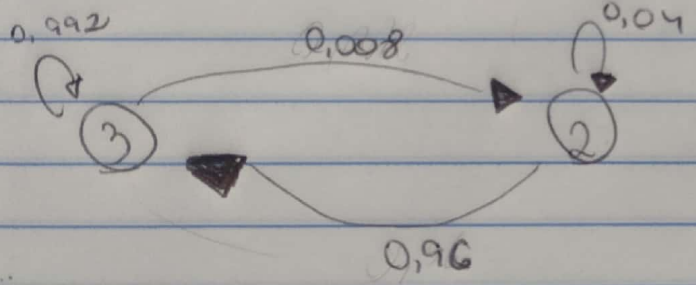

$P(\underbrace{X_4}_{n+1} = 2 \mid \underbrace{X_3}_{n} = 1, \underbrace{X_2}_{n-1} = 1) = 1/4 = p_{12}$

$P(X_4 = 2 \mid X_3 = 1, X_2 = 2) = 1/2 = p_{12}$

A hipótese markoviana necessita saber os valores anteriores/passados/ para saber os futuros.

② p_{33} p_{32} $x_0 = [1\ 0]$

$x_2 = [0{,}992,\ 0{,}008]$

$p_{ik} = \ldots$

p_{32} (tudo vai estragar) $= (1-p)^3$ → 3 vezes máq. estragam

$p_{33} = 1 - p_{32}$

p_{22} = as duas máq. vão estragar $= (1-p)^2$

$p_{23} = 1 - p_{22}$

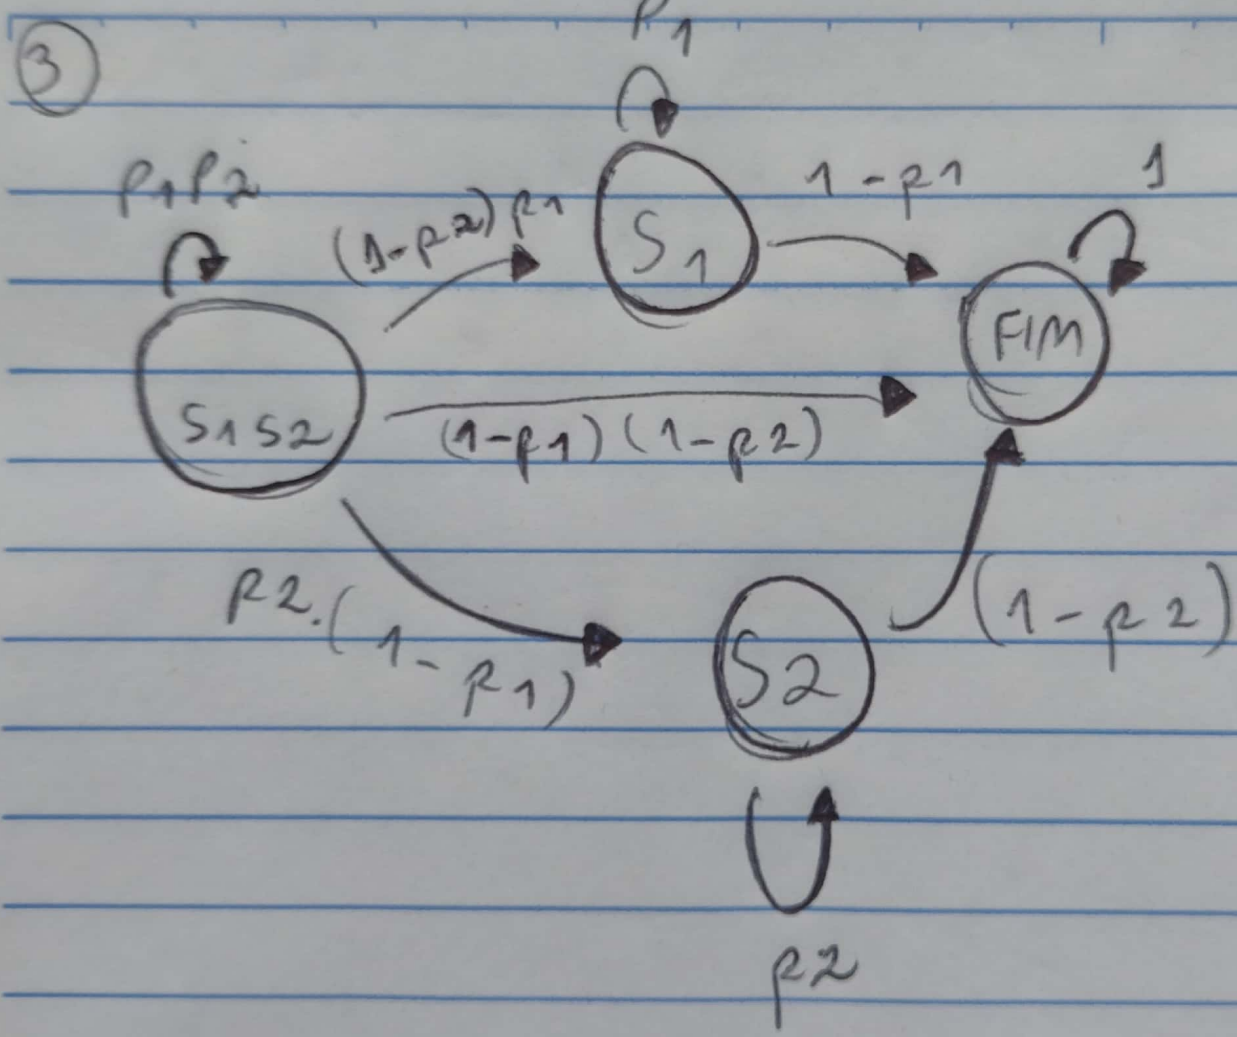

Regime estacionário

$p_3 + p_2 = 1$

$0{,}96 p_2 = 0{,}008 p_3$

$p_3 = 0{,}992$
